MARKS	WORD LIMIT
10	~150 words

Answer Hint

West Asian geopolitics; Houthi movement; civilian aviation security; airspace closures; regional instability; international law; energy security; crisis management

Model Answer

Introduction

West Asia occupies a strategically important position connecting Asia, Europe and Africa. Regional conflicts involving state and non-state actors can threaten airports, airspace and international transport networks.

Major Impacts

1. Civilian Safety: Missile and drone threats can endanger passengers, airport workers and critical infrastructure.

2. Aviation Disruptions: Airspace restrictions and flight cancellations may force airlines to change routes, increasing costs and travel time.

3. Economic Consequences: Disruptions can affect tourism, trade, cargo movement and business connectivity.

4. Regional Instability: Attacks on civilian infrastructure can intensify geopolitical tensions and increase the risk of escalation.

Way Forward

States should strengthen intelligence-sharing, air-defence coordination and risk-based aviation security. Airlines and airport authorities should maintain contingency plans, communicate changes promptly and coordinate with civil aviation regulators. Diplomatic engagement and compliance with international law are essential to reduce escalation and protect civilians.

Conclusion

Regional security and global connectivity are closely linked. Sustainable aviation security requires preparedness, international cooperation and efforts to resolve conflicts peacefully.
