Ancient History · GS - I

Evaluate how archaeological evidence can be used to reconstruct the social hierarchy, economic networks and cultural practices of Iron Age societies.

EXAM YEAR	PAPER	SUBJECT
DAILY PRACTICE 27/11/2026	GS - I	Ancient History

MARKS	WORD LIMIT
10	~150 words

Answer Hint

Archaeological context, funerary practices, material culture, numismatics, trade networks, social stratification, limitations of interpretation

Model Answer

Archaeological evidence provides an important means of reconstructing societies that left limited written records. Artefacts, burial remains and settlement patterns offer insights into their economic, social and cultural organisation.

1. Understanding social hierarchy

1. Differences in burial goods, ornaments, weapons and elaborate funerary structures can indicate variations in wealth, status and social authority.
2. Specialised objects such as bronze wagon components may suggest access to resources, skilled craftsmanship and elite lifestyles.

2. Reconstructing economic networks

1. Coins provide evidence of monetary practices, political authority and possible exchange networks.

2. Metal composition, manufacturing techniques and similarities between artefacts from different regions can help identify trade and cultural contacts.
3. Transport-related artefacts offer clues about mobility and the movement of goods.

3. Interpreting cultural practices

Human remains, burial arrangements and associated objects can reveal funerary customs, ritual behaviour and beliefs concerning death and social identity. Discoveries from pre-Roman Gaul, for instance, contribute to understanding the diversity of Iron Age communities.

4. Limitations

Archaeological evidence is often incomplete. Objects may have multiple functions, while preservation conditions and excavation methods influence what survives. Therefore, interpretations must be supported by scientific dating, comparative analysis and careful contextual examination.

Thus, archaeology helps reconstruct the complexity of Iron Age societies, provided that material evidence is interpreted critically rather than treated as definitive proof of particular social or religious practices.
