DAILY PRACTICE 28/11/2026	GS - III	Defence & Security

MARKS	WORD LIMIT
15	~250 words

Answer Hint

Crowd management, threat intelligence, urban policing, emergency response, surveillance, inter-agency coordination

Model Answer

Large-scale concerts and public entertainment events attract thousands of people, creating complex security and crowd-management challenges. Threats such as bomb warnings, stampedes and unauthorised access require coordinated preventive measures.

Major challenges:

1. **Threat assessment:** Anonymous threats and online intimidation create difficulties in identifying credible risks.
2. **Crowd density:** Overcrowding, inadequate entry and exit arrangements and panic can cause casualties.
3. **Urban constraints:** Traffic congestion and limited emergency access can delay police and medical assistance.
4. **Cyber vulnerabilities:** Digital ticketing systems and online platforms may be exploited to disrupt events or spread misinformation.
5. **Coordination gaps:** Poor communication among organisers, police, municipal authorities and emergency services can weaken response.

Measures for improvement:

- Conduct risk assessments before events and strengthen intelligence sharing.
- Introduce controlled entry, baggage screening and adequate surveillance.
- Prepare evacuation routes, emergency medical facilities and crowd-flow plans.
- Establish a unified command structure involving organisers and public authorities.
- Use public communication systems to prevent rumours and panic.

Conclusion: Event security must combine intelligence-led policing, technological preparedness and professional crowd management. A preventive and proportionate approach can protect public safety while preserving citizens' access to cultural and recreational activities.
