## Answer Hint

**Strategic partnership, green energy, technology transfer, maritime cooperation, trade diversification, sustainable development**

## Model Answer

India's five-year roadmap with Denmark reflects the growing importance of partnerships that combine economic interests with environmental sustainability and strategic cooperation.

Its significance can be understood across three major dimensions:

**1. Green energy and sustainable development**

- Denmark's expertise in wind energy and sustainable technologies can support India's renewable energy expansion.
- Cooperation in energy efficiency, green hydrogen and clean technologies can contribute to India's climate commitments.
- Joint research and investment can encourage environmentally sustainable industrial development.

**2. Maritime and strategic cooperation**

- Collaboration can strengthen maritime domain awareness and information sharing.

- Greater engagement can support the security of sea lanes and maritime infrastructure.
- Defence cooperation can promote technological exchange and mutual understanding.

**3. Trade and technological advancement**

- Stronger trade and investment ties can diversify India's economic partnerships.
- Cooperation in digital technologies, innovation and research can improve industrial competitiveness.
- Business partnerships can create opportunities for startups and skilled employment.

**Challenges:** Differences in regulatory frameworks, investment risks, technological dependence and geopolitical uncertainties may affect implementation.

**Conclusion:** The roadmap provides an opportunity to translate shared interests into practical outcomes. Regular institutional dialogue, private-sector participation and measurable targets will be essential to ensure that India-Denmark cooperation delivers long-term economic, environmental and strategic benefits.
