Defence & Security · GS - III

Discuss the major challenges involved in securing the Line of Control (LoC) and suggest measures to strengthen India's counter-infiltration preparedness.

EXAM YEAR	PAPER	SUBJECT
DAILY PRACTICE 28/11/2026	GS - III	Defence & Security

MARKS	WORD LIMIT
15	~250 words

Answer Hint

Difficult terrain, infiltration, ceasefire violations, surveillance technology, intelligence coordination, border infrastructure, local cooperation

Model Answer

The Line of Control (LoC), separating Indian- and Pakistani-administered areas of Jammu and Kashmir, is a sensitive security frontier. Its difficult geography and persistent security challenges require continuous vigilance by Indian forces.

Major challenges

1. **Difficult terrain:** Mountains, forests, valleys and extreme weather complicate surveillance and troop movement.
2. **Infiltration attempts:** Armed individuals and suspected militants may exploit gaps in surveillance to cross the LoC.
3. **Cross-border threats:** Ceasefire violations and suspected support to infiltration networks create operational challenges.
4. **Technological limitations:** Communication disruptions, difficult visibility and equipment vulnerabilities can affect monitoring.

5. **Civilian security:** Border communities face risks arising from firing, displacement and restricted movement.

Measures to strengthen preparedness

- Integrate drones, thermal sensors, ground surveillance systems and secure communication networks.
- Improve intelligence sharing among the Army, intelligence agencies and other security forces.
- Strengthen border infrastructure and rapid-response capabilities.
- Develop community-based information networks while protecting civilian rights.
- Maintain diplomatic and military communication mechanisms to prevent escalation.

The arrest of an individual crossing the LoC highlights the importance of continuous surveillance and coordinated response.

A combination of technological modernisation, intelligence-led operations and effective border management is essential for securing the LoC.
