Introduction

Public charitable trusts occupy an important space between the State and market. Through philanthropic resources and community-oriented interventions, they can address development gaps and promote inclusive growth.

Contribution to Inclusive Development

1. Education: Trusts can provide scholarships, schools, vocational training and digital-learning facilities to disadvantaged groups.

2. Healthcare: They can support hospitals, preventive healthcare, nutrition and medical outreach in underserved regions.

3. Social inclusion: Initiatives can assist persons with disabilities, women, children, elderly persons and marginalised communities.

4. Innovation: Their relative flexibility enables experimentation with locally appropriate development models.

5. Disaster response: Trusts can mobilise resources rapidly during humanitarian emergencies.

6. Community participation: Local engagement can improve ownership and sustainability of projects.

However, concerns regarding transparency, accountability, geographical concentration and donor priorities necessitate effective regulatory oversight.

Conclusion

Public charitable trusts can complement government programmes by mobilising **capital, expertise, innovation and community participation**. Their greatest contribution lies in reaching underserved populations while remaining accountable, transparent and aligned with broader constitutional objectives of inclusive development.
