Polity & Governance · GS - II

The Gati-Shakti Yojana needs meticulous coordination between the government and the private sector to achieve the goal of connectivity. Discuss.

EXAM YEAR	PAPER	SUBJECT
2022	GS - II	Polity & Governance

MARKS	WORD LIMIT
10	~150 words

Answer Hint

PM Gati Shakti promotes integrated infrastructure planning through a coordinated, multimodal approach. Its success depends on inter-ministerial cooperation, private investment, data sharing, timely clearances, last-mile connectivity and alignment between infrastructure creation and economic demand.

Model Answer

Introduction

Launched in 2021, PM Gati Shakti is a National Master Plan intended to improve multimodal connectivity and integrated infrastructure development across India.

Body

Need for Coordination

1. Integrated Planning: Roads, railways, ports, airports and logistics networks must be planned together to avoid duplication and infrastructure gaps.

2. Private Investment: Public-private partnerships and private capital can support infrastructure financing, technological innovation and efficient project execution.

3. Data Sharing: The digital platform facilitates coordination among ministries and departments through geospatial information, helping identify bottlenecks and improve project planning.

4. Faster Implementation: Coordination among governments, utilities, land authorities and private contractors can reduce delays in land acquisition, clearances and relocation of infrastructure.

5. Economic Connectivity: Better links between industrial clusters, agricultural markets, ports and consumption centres can reduce logistics costs and improve competitiveness.

Challenges

Fragmented departmental priorities, financing constraints, environmental concerns and disputes over land can impede implementation. Private participation also requires transparent contracts and predictable regulations.

Conclusion

PM Gati Shakti can transform India's logistics and infrastructure landscape, provided that governments and private stakeholders coordinate effectively. Transparent governance, sustainable planning and regular monitoring are essential for achieving seamless connectivity.
